

Shikhar Srivastava

shikhar.srivastava@utexas.edu | shrivastavshikhar.github.io

Summary

14+ years of hands-on experience in end-to-end architecture, design, development and troubleshooting of scalable intelligent systems. Versed in C, CPP, CUDA, Java, Scala, Python, Go, Rust, SQL, and PyTorch.

Education

The University of Texas at Austin, Masters of Science in Computer Science Jan 2025 – present
Current GPA: 3.95

Indian Institute of Technology, Dhanbad, BTech in Computer Science & Engineering Aug 2006 – May 2010
Overall absolute GPA: 7.74

Experience

Software Architect, Product Development Leader, Ericsson India Private Limited – Jan 2024 – June 2024
Bangalore, KA, India

- Deliver cloud-native, hyper-scale, resilient, robust, distributed data processing software solutions with security and quality.
- Involved in the end-to-end design, development, and troubleshooting of distributed data platforms and intelligent solutions.

Architect, Data Platforms, Reliance Jio Platforms Limited – Bangalore, KA, India Aug 2017 – Sept 2023

- Responsible for driving end-to-end strategic initiatives regarding architecture, design, and development of distributed data platforms and intelligent solutions.
- Lead innovator for multiple scalable solutions built for both on-premise and on-cloud environments.

Technical Team Lead, Engineering, Nextag Inc – Gurgaon, HR, India Oct 2011 – July 2017

- Built resilient and robust platforms supporting large-scale streaming data ingestion pipelines.
- Developed high-capacity, low-latency data processing layers and distributed analytical and predictive ML pipelines.

Associate Technology L1, Development, Sapient Nitro – Gurgaon, HR, India July 2010 – Oct 2011

- Worked as a software developer building, deploying, and troubleshooting MVC-based web applications.

Patents

Data Receiver Framework (US Patent No. 12301895)

Petabyte scale, ultra-fast, reliable, cost-optimal streaming data receiver framework.

Data Ingestion & Processing Framework (US Patent No. 12524424)

Scalable, reliable, and fault-tolerant low-code data ingestion and processing platform.

Format Preserving Encryption at Source Service (US Patent No. 12505232)

Format preserving encryption at source in a big data ecosystem to secure sensitive data sources at scale.

Data Quality Platform (IN Patent No. 574947)

Ultra-thin, fast, cost-effective, reliable, and consistent data quality platform for big data ecosystem.

Uniform Data Access API Platform (US Patent App No. 20240160629)

Scalable, cost-optimal, auto-adjusting, self-adapting, intelligent, and unified data access API platform.

Advanced Business Intelligence, Notifications, Alerting & Rules Engine (IN Patent App No. 202321006296)

Secured, scalable, and resilient data visualization and data exploration platform.

Certifications and Awards

Behavior Design Course

Jan 2024

Completed Behavior Design online course from Dr. BJ Fogg, Fogg Behavior Academy.

Cloudera Data Impact Awards Finalist - Data for Good

Jan 2020

Built contact-tracing prototype during COVID-19 using telecom data for approximately 400 million customers.
